

One name. One mark. One promise.

The definitive guide to how Hussh shows up in the world — in slides, on screens, in legal filings, and on paper.

Everyone who touches the brand, from an engineer writing a commit message to an agency briefing a photographer, should start here.

Four layers. Never mixed.

Hussh is a company, a product, a category, and a mark. These four things have separate names and separate jobs. They appear together often. They should never be confused with one another.

LAYER	NAME	WHAT IT IS	WHERE IT APPEARS
Corporate mark		The logo. A single glyph. No wordmark accompanies it.	Favicon · app icon · letterhead · foil stamp
Company name	Hussh	The operating business. Legal: Hussh Technologies Corporation.	Contracts · press · footers · invoices
Product name	One	Our first product. A personal, private AI.	App stores · marketing · UI · packaging
Category name	one	The category the product defines. Lowercase noun.	Prose only. "Everyone should have one."

WHY THE DUAL CASE

One is the product — a proper noun. one is the category — a common noun. The same word in two registers lets us own both a brand and a language. Never capitalize mid-sentence when describing the category: "Every person should have one." Always capitalize when naming the product: "One is available on WhatsApp today."

Three official lockups.

A lockup is a permitted combination of the four layers. There are three. Any combination not shown here is not approved for use.

PRIMARY — MARKETING

MARK · PRODUCT · PERIOD

COMPANY — CORPORATE

MARK · COMPANY · NO PERIOD

FULL — WHEN BOTH ARE NEEDED

Hussh One.

COMPANY · PRODUCT · PERIOD · NO 🤫

The smallest piece of our identity.

The gold period after One is the brand's visual signature. It's a full stop that claims confidence and finality — a statement ending, not a sentence waiting. Used correctly, it does the work of a logotype. Used carelessly, it becomes decoration. Treat it as sacred.

Where the period appears

- ✓ Marketing product lockups: One.
- ✓ Slide titles in keynote register: Everyone should have one.
- ✓ Subscription and tier names: Care. Pro.
- ✓ In-product hero headers: Your connections.

Where the period does NOT appear

- ✗ USPTO filings or legal documents (filed mark is One, no period)
- ✗ URLs, handles, or email addresses (hussh.ai, @hussh — never @hussh.)
- ✗ After the company name: Hussh, never Hussh.
- ✗ Body copy running prose — only reserved for brand lockups

ONE RULE TO LIVE BY

The period is gold, always. If you cannot render gold — on a fax, in a PDF export, on a black-and-white print — leave the period black. Never substitute a different color. Never render it larger than the x-height of the surrounding type.

Three colors. No exceptions.

Black, white, and one warm gold. That is the entire palette. When something feels like it's missing — resist adding another color. The restraint is the identity.

			
Hussh Black #000000 RGB 0 0 0 PMS Black 6 C	Hussh White #FFFFFF RGB 255 255 255 PMS Bright White	Hussh Gold #D4A574 RGB 212 165 116 PMS 7508 C	System Dim #86868B RGB 134 134 139 SUPPORT ONLY

Weight discipline

Black is dominant on dark surfaces. White is dominant on light. Gold is never dominant — it exists only as accent, used sparingly, reserved for the most important word on a page. System Dim is a utility gray for secondary UI text. It is not a brand color; treat it as invisible scaffolding.

DO

Let gold appear exactly once per composition — on the period, on a key word, on an accent line. Never twice.

DON'T

Use gold for large fills, backgrounds, or multiple elements in a single view. Gold in volume becomes decorative. Decorative gold is not our brand.

One type family. Used with care.

SF Pro Display for all marketing and product surfaces. SF Pro Text for body. Helvetica Neue is the only approved fallback for environments where SF Pro is unavailable. We do not use serifs, script faces, or novelty types. Ever.

DISPLAY · SF PRO DISPLAY · 700 · -2% TRACKING

Everyone should have one.

HEADING · SF PRO DISPLAY · 600 · -1% TRACKING

The personal one.

BODY · SF PRO TEXT · 400 · 0% TRACKING · 1.55 LEADING

A private, personal AI that remembers you, protects you, and works for you. Free to start. On the phone in your hand.

MICRO · SF PRO TEXT · 600 · +150 TRACKING · ALL CAPS

FREE · NO APP TO INSTALL · NO CREDIT CARD

THE TYPE TEST

If you are about to reach for a decorative font — stop. The restraint is the point. Weight and size do the work of variety. A single family, used across the entire brand, is what makes Hussh feel Hussh.

How we speak.

We write in the keynote register: declarative, quiet, confident. No exclamation marks. No emoji outside of our corporate mark. No corporate hedging. A Hussh sentence could be a headline, a billboard, or a gravestone — and it would still read like us.

CONTEXT	HUSSH SAYS THIS	NOT THIS
LAUNCH	Everyone should have one.	Revolutionize your AI experience!
ONBOARDING	What should I call you?	Please enter your full name.
CONSENT	Someone just asked to see your data.	Third-party data access request pending.
ERROR	This is on me.	Oops — something went wrong!
UPSELL	Care. INR 249 / month.	Unlock Premium — 50% off today only!
GOODBYE	Rest well.	See you next time!

THE VOICE TEST

Read the sentence aloud. If it sounds like a commercial, rewrite it. If it sounds like a friend — quiet, clear, serious when it needs to be — it's Hussh.

What we do not do.

When in doubt, this list governs. Every one of these has happened at another company, earned them a weaker brand — and we will not repeat them.

- 01 We do not change the spelling of Hussh. It is Hussh, not Hush or Hushh.
- 02 We do not separate the corporate mark from the brand. It is a single glyph.
- 03 We do not render the period in any color but gold — or black, when gold is impossible.
- 04 We do not use gold for fills, backgrounds, or large areas. Gold is always a single word or mark.
- 05 We do not add a second typeface. SF Pro, always. Helvetica Neue only when SF Pro is unavailable.
- 06 We do not use exclamation marks in product or marketing copy.
- 07 We do not use emoji other than our corporate mark, which only appears in the corporate mark position.
- 08 We do not call One an app, a chatbot, or an assistant. It is a one.
- 09 We do not abbreviate the product name. It is not "HO" or "h1" or "the One app."
- 10 We do not design drop shadows, gradients, or decorative strokes into the mark. The period is the only embellishment.

Everyone should have one.

How we talk about Ones.

Language is the product. When two Ones meet, when a human says 'my One,' when a brand references 'the handoff' — each word is a category-defining act. This chapter governs them all. Get this wrong and Hussh becomes one more AI assistant. Get it right and we own a new vocabulary — the same way 'iPhone' became a noun, and 'googling' became a verb.

IN THIS CHAPTER

09.1	The four nouns	One · Ones · handoff · ledger
09.2	Possessives	"My One." "Our Ones."
09.3	The verbs	What Ones do and do not do
09.4	How we describe a handoff	Grammar of the interaction
09.5	PCHP, handoff, One	Three words, three altitudes
09.6	Voice examples	Ten scenarios, say-this not-this
09.7	The ten mistakes	Twin to Chapter 07

COMPANION DOCUMENT

This chapter is the companion to Hussh RFC-001 — The Handoff. The RFC defines the pattern. This chapter defines the language we use to talk about it. Read them together. Copywriters, PR, engineers, and external partners should all be fluent in both.

Four nouns. No more.

The entire Hussh product vocabulary, as of today, fits in four nouns. Every other category term — bot, assistant, agent, chatbot, claw, copilot, AI — is off-brand in our own voice. We may mention them when describing what others build. We never use them to describe what we build.

NOUN	CASE	MEANING	CORRECT USE
One	Proper · cap	A single personal agent belonging to one human.	"My One. Priya's One. Get a One."
one	Common · lower	The category noun. A personal AI.	"Everyone should have one."
Ones	Plural · cap	Two or more distinct Ones. Systemic statements only.	"Two Ones can negotiate. Our Ones agreed."
a handoff	Common · lower	The event when two Ones meet on behalf of humans.	"The handoff took 10 seconds."
the ledger	Common · lower	The tamper-proof record of every handoff.	"Check the ledger."

WHY FOUR

Every category owner wins by owning a short vocabulary. Apple had iPod, iPhone, iPad. We have One, Ones, handoff, ledger. Resist the urge to add a fifth.

My One. Not my Hussh.

A One belongs to a human. The possessive is sacred. Hussh is the company that makes the product; nobody possesses Hussh. Ones are what humans possess — individually, not collectively. This chapter governs the grammar.

WE SAY

"My One."

The personal possessive. Default form.

"Priya's One."

Third-person possessive. Proper noun + One.

"Our Ones."

Plural. Family or team context only.

"The team's Ones."

Collective plural. Acceptable in work settings.

"A One."

Indefinite. Before the human has chosen.

"Your One handled it."

Second person. When addressing a user.

WE DO NOT SAY

"My Hussh."

Hussh is the company, not the product.

"My AI."

Generic. Off-brand. Category-blurring.

"My assistant."

Passive. A One is not subordinate.

"My agent."

Too enterprise. Agent is what we enable.

"The One app."

One is not an app. It is a relationship.

"Your bot."

Never. Not in any internal or external voice.

THE POSSESSIVE TEST

Read the sentence aloud. If the possessive competes with the word after it for emphasis, rewrite. Good: 'My One drafted a reply.' Bad: 'My hushh one drafted a reply.'

What a One does.

Verbs carry register. A 'helpful' product assists, serves, supports. Ours listens, holds, drafts, settles. These are the verbs of a chief of staff, not a call-center queue. Every product string, every marketing headline, every engineer's commit message should prefer the left column.

WE SAY	WE DO NOT SAY
listens	monitors · surveils · tracks
holds	stores · records · logs
drafts	generates · creates · outputs
reaches out	contacts · pings · messages
settles	completes · finalizes · closes
remembers	retains · persists · caches
protects	blocks · restricts · firewalls
pushes back	rejects · declines · denies
sits with you	is available · stands by · awaits
rests	idles · sleeps · powers down

THE VERB TEST

If a verb would make sense in a chief-of-staff briefing to a Fortune 500 CEO, use it. If it sounds like a SaaS help doc, rewrite. A One does. It does not execute.

The grammar of meeting.

When two Ones meet, the subject of the sentence matters. Ones are the subjects of handoffs; humans are the subjects of intent. Hussh is never the subject of either — we are the platform that makes it possible, never the actor.

WE SAY	WE DO NOT SAY
"My One handed off to Stephanie's."	"Hussh scheduled a meeting."
"Our Ones agreed on Thursday."	"The AI booked a 30-minute meeting."
"The handoff took 10 seconds."	"Our automation completed in 10s."
"She pushed back on Thursday."	"The user rejected the proposed slot."
"The ledger shows 14 messages exchanged."	"We logged a trace of 14 API calls."
"Settled at 2:24 PM."	"Completed at 2:24 PM."

PCHP. Handoff. One.

THE PROTOCOL

PCHP

Machine layer. Engineers speak it. Customers rarely hear it. Appears in RFCs, SDKs, whitepapers.

THE INTERACTION

Handoff

User-facing word. The event a human experiences. Used in product, marketing, and everyday speech.

THE PRODUCT

One

The thing a human has. The brand. The name customers say in the wild.

The ten lines.

Ten scenarios. Ten correct lines. This is the most-used reference in the entire primer. Engineers writing product strings, PR writing press releases, copywriters writing ads — all three live on this page.

SCENARIO	HUSSH SAYS	NOT
INTRO	"I'm your One."	Hi, I'm Hussh AI.
HANDOFF OPENS	"My One is reaching Stephanie's."	Contacting recipient...
PENDING	"They're working it out."	Processing your request.
SETTLED	"Thursday at 10:30."	Meeting successfully scheduled.
PUSHBACK	"Want me to push back?"	Would you like to cancel?
ONE-TO-ONE	"Her One and mine agreed."	The AIs reached consensus.
LEDGER	"Check the ledger."	View audit log.
FAMILY	"Our Ones share the calendar."	Family account syncing enabled.
PRESS	"Two Ones can schedule in 10 seconds."	Hussh AI automates scheduling.
LEGAL	"The handoff is sealed and exportable."	Transaction is recorded in database.

THE TEN-LINE TEST

If a line you're about to ship doesn't match one of these ten registers, you probably haven't written it yet. Come back to this page before you publish.

What we do not do.

Chapter 07 lists the ten brand-level mistakes. This is the twin — ten agent-to-agent mistakes. Keep both lists together in your head. Together they cover 95% of the ways a sentence can go wrong in Hussh's name.

- 01 We do not say "my AI." We say "my One."
- 02 We do not say "the handoff completed." We say "the handoff settled."
- 03 We do not capitalize "handoff" — it is a common noun, like "a conversation."
- 04 We do not say "agent" or "bot" as synonyms for One in any external document.
- 05 We do not say "Hussh booked the meeting." We say "my One handed off to theirs."
- 06 We do not conflate PCHP and One. One is the product; PCHP is the protocol.
- 07 We do not call the ledger an "audit log" in product copy. It is the ledger.
- 08 We do not say "One-to-One." The interaction is a handoff. The prefix is off-brand.
- 09 We do not describe the handoff as "automated" or "AI-powered." It is simply a handoff.
- 10 We do not say "your AI will do X." We say "your One will do X."

Everyone should have one.

HUSSH BRAND PRIMER · v1.1 · APRIL 2026
